Total employees : 1 000*

2011 Turnover : 193 M€*
* France Activity Only

Certifications :

- ISO 9001 V2000
- CEFRI F
- ASME Stamp U
- UDT
- UIC
- MASE

BOCCARD at a GLANCE

Since 1918 **BOCCARD** has established itself as a major player in the field of industrial installation management, always at the cutting edge of performance and innovation.

A family-run business in development for 4 generations as an Industrial integrator for oil & gas, energy, industries and life-sciences. With more than 3000 men and women worldwide, **BOCCARD** designs, manufactures, installs and maintains Industrial Plants for Fluid Processes as a Turn Key Constructor.

A LONG HISTORY IN THE NUCLEAR FIELD

BOCCARD activity in the nuclear industry is closely linked to the French Nuclear power history. **BOCCARD** participated in the fabrication and erection of most of the thirty-four 900MWe class reactors, the twenty 1300 MWe and four 1450 MWe nuclear power reactors operating in France.

Most of these reactors have been constructed in the 1970s and early 1980s, and those have been the years when **BOCCARD** mobilized most of its workforce to the nuclear power plant job sites.

FROM DESIGN TO MAINTENANCE

Supplying piping systems and piping supports for the nuclear island and the auxiliary buildings, **BOCCARD** has developed for the past 4 decades the specific know-how and working procedures required in the nuclear industry applying all the relevant codes and standards such as CODAP / CODETI / RCC-M / ASME / EDF's CST & CRT. When the construction of the new plants slowed down, **BOCCARD** maintained close presence in most of the sites by proposing maintenance services.

All of **BOCCARD**'s workshops in France and abroad which participated in these projects were qualified according to the highly demanding Nuclear Standards.

Amongst other projects in the Nuclear Field, BOCCARD is currently performing the detail engineering, procurement, fabrication and installation of the Auxiliary Piping Systems for the EPR at FLAMANVILLE. Our main customers for the Nuclear Activity are EDF, Areva and the CEA.
