Total employees : 86

2012 Turnover : 7.1 M€

Certifications :

- CEFRI n° 156 E
- QUALIFICATION EDF
UTO (Analysis,
Measurements and
Testing)

ACTIVITIES

Since 1972, SETIS is a major service provider in topography, geodetic and 3D metrology for nuclear industry.

Its competences and its know-how are recognized in this field of activities. SETIS implements the most accurate methods and means for 3D measurement without contact.

Between 1982 and 1999, SETIS took part in the building of La Hague site.

Since 1994, SETIS carries out dimensional metrology of Head Vessel Replacement and since 2000 the one of the Stream Generator Replacement.

From 2003 to 2007 and since 2010 SETIS performs the complete metrology of the LHC - magnets of the CERN.

- Industrial geodesy , triangulation and metrology
- Engineering and technical assistance

- Stability inspections and monitoring surveys of nuclear sites, Cooling Towers
- Dimensional measurement by laser tracker, static and dynamic
- Large scale metrology
- « As Built » measurement with scanner laser
- Inspection of aircraft and automotive tools
- Technical assistance of process of dimensional measurement and industrialization
- Digitalization of complex shapes, Reverse engineering
